

# Route Views Futures: Where to from here?

David Meyer  
NANOG 40

# History

- Circa 1995 – Randy Bush gave me a ebgp-multihop session from one of his routers at MAE-WEST
- Time went by, we got more peers, researchers wanted data, we deployed more boxes (in various locations)
  - RouteViews became a public utility
- Lots of support from the communities of interest (ops, researchers, NSF, UO, etc)

# However...Things have changed

- Lots of servers of various types
- RIPE/RIS
- Looking glasses
- “BGPmon”
- ...
- And perhaps most importantly, things have changed at UO

# So What Now

- Should we keep routeviews going?
  - i.e., do people find value in routeviews these days?
  - Or are there enough other sources of this data?
- If not, what about the “historical data”
  - Both MRT and 'sh ip bgp' formats?
- If so....
