PeeringDB Update
NANOG Peering BOF – ABQ, NM

- PeeringDB was created in 2004 by Richard Steenbergen
- PeeringDB helps facilitate the easy access of information as it relates to:
  - Co-Location Facilities
  - Internet Exchange Information
  - Network Peering Information (ASN, public presence, private presence, contacts, etc).

- Allows potential peers to find you!
  - Perhaps you will get peering with someone who never knew you existed.

- Makes evaluating peering requests from you much easier.
- Easier to find peer's contact information and to update your own.

Statistical Information

- ## As of October 15th, 2007
  - 941 Total Peering Network Entries
  - 177 Total Public Exchange Point Entries
  - 3177 Total Unique Public Exchange Presence Entries
  - 338 Total Private Facility Entries
  - 2696 Total Unique Private Facility Presence Entries
