Making the Root Soak up More Badness

NANOG 66, February 2016

Jeff Osborn
President, ISC
jeff@isc.org

- 13 different root server addresses but hundreds of actual servers, via anycast
- ISC runs F-Roots; there are about 60
- DDoS attacks overwhelm target servers
- What about 600 or 6000, pushed closer to the edges?
- Attack traffic would be absorbed closer to the attacker
- Work with us on making this happen? Contact f-root@isc.org
